

Technology Environmental Sustainability Standards

Developed and endorsed by CIOs and CTOs, this set of 50 coded metrics and KPIs illustrate the breadth and depth of IT's impact on environmental sustainability in functions and across enterprises.

For more information and access to interactive standards, visit SustainableIT.org/standards

***Sourcing E-sustainability criteria categories:**
Energy, transportation, waste, packaging

Criteria for sustainability within above categories:
Carbon product footprint, eco-label/energy certifications, renewable energy use (solar, wind, geothermal, hydropower, tidal, biomass), GHG emissions, low-carbon fuels/electric vehicles in fleet, product lifespan, commitment to recycled material in product/packaging, waste reduction, and compliance with government rules and directives.
